

Exercise Computer graphics – (till October 5, 2006)

Ultra-fast line drawing

- Exercise 6:** In the lecture we have seen the mid-point algorithm for ellipses, however, only the part of the ellipse between 45° and 90° was drawn. Finish the arc between 0° and 45° and include it into the application.
- Exercise 7:** Reduce the ellipse-version of the mid-point algorithms to circles. Why is this version faster?
